

AKSHAT JAISWAL

Senior Software Engineer • Distributed Systems & FinTech Architecture

Bengaluru, India • Phone: +91 9839783219 • Email: akshathrx6393@gmail.com • LinkedIn: [linkedin.com/in/ialexjx/](https://www.linkedin.com/in/ialexjx/)

EXECUTIVE SUMMARY

High-velocity **Senior Software Engineer (SSE)** with 2.5+ years of production experience architecting mission-critical distributed systems, high-throughput data pipelines, and sub-second FinTech gateways. **Fast-tracked to Senior Software Engineer in record 2.5 years** at Digitap.AI; consistently rated A+ (Exceptional) across all appraisal cycles. Proven track record of operating directly in production with zero staging safety nets, scaling daily transactions from 28k to 90k, engineering a **2,500 TPS asynchronous purge engine**, and executing a **150 TPS live database migration** with zero downtime. Deep expertise in Java 25, Virtual Threads, Spring Boot, distributed locking, and banking compliance (Aadhaar, NPCI, UIDAI).

CORE TECHNICAL PROFICIENCIES

Languages & Runtimes:	Java 25 / 21 / 17 (Virtual Threads / Project Loom), SQL, Core Java (Multithreading & Concurrency)
Frameworks & Architecture:	Spring Boot 3.x, Spring Security (RBAC / OAuth2), Spring Data JPA, Hibernate, Microservices, RESTful APIs
Distributed Systems & Caching:	Redis (Distributed Mutex SET NX EX, Caching, Pub/Sub), Apache Kafka, AWS SNS, Event-Driven Architecture
Databases & Performance:	MySQL 8.0, Query Optimization (EXPLAIN ANALYZE, Covering Indexes), Sharding, Dual-DB Boundary Routing
Cloud, DevOps & Testing:	AWS (EC2, S3, RDS, CloudWatch, SNS), Docker, Maven, Git, CI/CD, JUnit 5, Mockito (98%+ Coverage)
FinTech Protocols & Security:	Aadhaar eSign (CCA/eMudhra), UIDAI OVSE (Offline XML), E-NACH (NPCI 008 Circular), JWE Encryption, VAPT

PROFESSIONAL EXPERIENCE

Digitap.AI — Senior Software Engineer (SSE) Aug 2023 – Present | Bengaluru, India

⚡ **PROMOTED TO SENIOR SOFTWARE ENGINEER IN 2.5 YEARS • RATED A+ (EXCEPTIONAL) ACROSS ALL APPRAISALS**

- **DigiLocker Platform Revamp & Daily Surge Scale:** Re-engineered legacy distributed platform by consolidating 4 fragmented repositories into 1 cohesive Spring Boot microservice; eliminated 4 chained AWS SNS hops with direct event dispatching. Scaled production throughput from **28k to 90,000 daily successful transactions** with zero client-reported bugs.
- **God-Tier 2,500 TPS Purge Engine:** Conceived and built an asynchronous bulk table and S3 purge engine capable of sustained **2,500 records/second** without table locks or API degradation, so performant it saturated AWS S3 rate limits (503 SlowDown).
- **150 TPS Batch Database Migration:** Engineered a high-throughput multi-threaded migration engine operating at **150 TPS**, migrating millions of historical customer records to an optimized schema with automated retries and zero downtime.
- **Dual-DB Boundary Routing ("Civil War" Architecture):** Built a dynamic boundary-based query routing and pagination engine bridging legacy and revamped MySQL databases seamlessly, preventing data fragmentation during the multi-month cutover.
- **eSign Gateway v2 Ground-Up Architecture:** Rebuilt enterprise contract execution engine using Java 25 & Virtual Threads. Pioneered **Single Aadhaar OTP Multi-Stamp** (stamping multi-document PDFs in a single session), dynamic (x,y) coordinates, and **sub-50ms in-memory callback decoding** via Apache PDFBox 3.x.
- **VKYC V2 Core Security & Month-Wide Analytics Engine:** Single-handedly engineered the full Spring Security RBAC framework (Agent, Admin, Lead, QA) and developed an analytics aggregation pipeline crunches **30+ days of hourly/daily metrics in 2–3 seconds**. Authored automated database migration preserving password hashes with **0 user credential resets**.
- **100% Concurrency Bottlenecks Eradicated:** Re-architected agent allocation algorithm, permanently resolving 100% of queue deadlocks for high-volume enterprise clients (BharatPe, Mpocket) under peak concurrency.

- **7-Day Greenfield Delivery (OVSE Aadhaar Engine):** Shipped an enterprise-grade Offline Verification Seeking Entity engine directly to production in **7 calendar days flat** with **99% unit test coverage** and cryptographic XML digital signature verification.
- **Autonomous Banking Gateway (NACH & NPCI):** Automated physical and E-NACH mandate pipelines across Kotak and Yes Bank via cron schedulers and event-driven AWS SNS parsers, eliminating 100% of manual Excel ops and replacing Firebase with hardened JWT.
- **Zero Staging Safety Net Direct-to-Prod Engineering:** Primary production firefighter for live banking gateways; hotfixed unannounced UIDAI breaking schema changes in minutes, executed live RDS cutover for **200,000+ daily requests**, and implemented JWE encryption.

Merck Group — Software Developer Trainee

July 2022 – July 2023 | Bengaluru, India

★ **98% UNIT & INTEGRATION TEST CODE COVERAGE CHAMPION**

- Engineered enterprise RESTful microservices in Java and Spring Boot adhering to clean Controller-Service-Repository architecture.
- Spearheaded unit and integration testing suites utilizing JUnit 5 and Mockito, achieving **98%+ code coverage** across core modules.
- Reduced production bug escape rate by **6%** through defensive programming, automated validations, and boundary condition tests.

HONORS, AWARDS & RECOGNITIONS

- **Fast-Track Promotion to Senior Software Engineer (2025):** Accelerated to SSE at Digitap.AI in record 2.5 years for high-velocity system delivery and zero-downtime architectural stability.
- **Quarterly Excellence Award (2026):** Conferred for ruthlessly consolidating 4 legacy repositories into 1 and engineering the 2,500 TPS purge engine.
- **Annual Rising Star Award (2024):** Awarded for untangling mission-critical legacy architectures (DigiLocker, eSign, VKYC) into sub-second Swiss watches.
- **98% Test Coverage Champion (Merck Group, 2023):** Recognized for exceptional software engineering discipline and test automation.
